COMPANY PROFILE AND HISTORY

In 1993, the Böhm - Plast Company was established as a commercial firm set to sell products of its subsidiary company Böhm Kunststoffe GmbH in the Czech Republic.

Sales warehouses were founded in Sokolov and Rychnov nad Kněžnou in the following years and the Company extended its business activities to the sale of complete plastic piping systems including cable protection pipes.

The establishment of business relations with SPT Telecom CZ increased the sale of cable protection pipes, which is the Company's main business commodity.

In 1998, the Company moved into the premises of a former glass factory in Krajková where its subsidiary company Böhm - extrutec s.r.o. started the production of cable protection pipes KORUFLEX and KORUHARD. By the end of 2001, both companies were merged into one: Böhm - extruplast s.r.o. Since 2001, we have also been producing flexible drain pipes called KORUDRAIN.

Today we have an important position in the delivery of drain systems, cable protection pipes and other commodities in the Czech market. Our customers are major foreign companies from Germany, Great Britain, Poland, Austria and other countries.

Our business policy is aimed at achieving total customer satisfaction. Consultancy, transport service, training and technical support are matters of course.

For more information please turn to our sales department of our company.

CORRUGATED LAND DRAINAGE PIPES KORUDRAIN

Land drainage pipes KORUDRAIN are the pipes with high mechanical and chemical resistance. Korudrain is made from high quality polyethylene or polypropylene. These two materials have excellent characteristics, guarantee a high level of robustness. Pipes can be easily apply during a wide temperature. Corrugated structure makes the high flexibility of the pipes allowing even narrow bendings that brings considerable advantages when the pipes are laid.

The land drainage pipes are supplied in 50m coils, various colours. Standard colour of the pipes is yellow and black. Other lengths and colours are available on request. Location, form and perforation size uniform on periphery of the pipe guarantee low resistance during absorption of water.

Korudrain is produced in standard diameters: DN 50, 65, 80, 100, 125, 160 and 200mm. Except land drainage perforated pipes we also produce solid single wall pipes.

Solid pipes are using as protection pipe for conductors, installing chambers for house connection etc.

Accessories: coupler, cap, bends - 90°, 45°, junction 45°, junction 90°, adaptors, outflow etc.

We offer as an accessories drainage control chambers DN 300, according to DIN 4095. These are conceived for unpretentious appending to drainage system.

MULTI-LAYER DRAIN PIPES

These pipes have a smooth inside layer, which enables trouble-free water outflow, and a robustly wrapped outside layer, which withstands heavy static and dynamic load. This production technology also ensures the longitudinal stiffness of the pipe, which is a great advantage during laying. Due to its low weight, handling the pallets on-site is trouble-free too. The pipes are produced of PEHD as partial perforation pipes with feed holes at an angle of 220° , as multipurpose pipes with an 85% closed section, and as full perforation pipes with feed holes evenly distributed around the whole circumference. Optimum water intake is achieved by vertical slits in the minimum outside circumference of the pipe. Part perforation (TS) and full perforation (VS) pipes are delivered with sand-proof flares. A gasket ring is inserted inside the flares of the multipurpose (MZ) pipes, which ensures watertightness in the pipe joint. These pipes are delivered in the following dimensions: DN 80, 100, 150, 200, 250, 300, and 350 in 6m bars on pallets. Accessory equipment includes: coupler, bends 45° and 90° , cap, pipe branch, discharge hole, and T-piece.

CABLE PROTECTION PIPES

KORUFLEX AND KORUHARD

These pipes are used for protecting underground heavy and light-current communication, safety and control cables, as well as cables of all kinds, especially in industrial production, under construction of roads and motorways, tunnels, railways, airports, power stations and power networks. Installation is possible in one layer or using spacers, in more layers on top of or beside each other.

KORUHARD - the inner and the outer layers are of PEHD. They are supplied in 6m long bars with a connection and in pallets. Other lengths are available on request.

Inside diameters DN 50, 63, 75, 90, 110, 125, 160, 175 and 200mm.

KORUFLEX - are supply in coils, manufactured with an outer corrugated layer of PEHD and inner layer of PELD. With this elastic inner layer of PELD is possible to achieve great flexibility even in little spaces for bending. We supply KORUFLEX in the standard length 50m. Other lengths are available on request. Inside is a string to better the pulling the cables.

We supply in 50, 63, 75, 90, 110, 125, 160 and 175mm.

Accessory equipment includes: coupler, gasket ring, bends 45° and 90°, cap, KORUBEST and KORUWELL spacers.

The system accessories for the cable protection pipes are HOFIT plastic cable chambers and Böhm DN 600 - 1000, single or multi-part. These are used in constructions.
